

FOR IMMEDIATE RELEASE

May 1, 2012

ATCO Software Inc. announces the introduction of ATCOREz Lite into its product line. ATCOREz Lite is designed for Activity Providers and Restaurants that just want to receive web bookings from their websites and QR codes.

ATCO Software Inc., Hawaii's leader in developing software for the Attractions Industry and Restaurants, today unveiled ATCOREz Lite. ATCOREz Lite is a slimmed down version of the ATCOREz software that has been available in Hawaii and on the mainland for the last ten years.

Attraction and restaurant customers now want to make reservations from their phones, tablets and computers. ATCOREz is the only company in Hawaii that includes shopping carts for the web and mobile web in their reservation platform. ATCOREz Lite offers only these front-end web bookings and not the entire operations, reconciliation, reporting and accounting functions of the complete ATCOREz platform.

ATCOREz Lite does not require the attraction provider or restaurant to change their current reservation system. Therefore, it is quick and easy to add the web bookings from ATCOREz Lite to any existing reservation system.

Just like ATCOREz, ATCOREz Lite's shopping carts are in English and Japanese.

Increase sales, eliminate phone calls and emails by adding ATCOREz Lite to your current operation.
